**PRESTAN®**

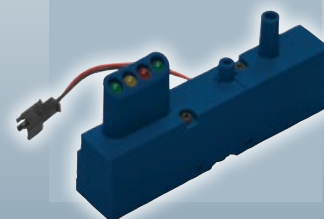

# Professional CPR Training Manikins

- Realistic look and experience
- Clamshell design
- Easy to insert face shield
- Face shield is secured
- Full chest rise and lung bag
- Face/Head tilt
- Audible clicker mechanism
- CPR Monitor

*All new manikins are now supplied with a blue CPR rate monitor, providing the same feedback but an extra feature now warns if the 120 compression upper limit is exceeded.*

*Blue monitors can also be purchased separately to easily upgrade any existing manikins...*

*Please ask for more details on ordering and pricing.*

# Professional CPR Training Manikins

Realistic to the eye and the touch, the Prestan manikin is unlike any other on the market. Our manikins are uniquely designed as a clamshell that accommodates an easy to insert face shield lung bag. Available individually or in convenient multipacks of four for class training purposes.

Prestan's revolutionary new CPR Rate Monitor allows for instant feedback to both instructor and student showing the rate of chest compression. This allows each student to gauge their rate of compressions on their own as well as allowing the instructor to monitor several students quickly and easily. With our patented face/head tilt, the Prestan manikin simulates the way an actual victim's head would move if they required CPR. In addition, the unique construction of our manikins incorporates a mechanism to help trainees use the appropriate force to compress the chest to the correct depth.

- Realistic looking and acting manikin is more acceptable to both instructors and students.
- Far easier and faster for you to carry and set up at training sites.
- Easy to insert face shield lung bag speeds setup of the manikin.
- Face shield is secured so it won't slip and there's no need for adhesives.
- Gives each student a realistic experience that provides for the best "real life" CPR outcomes.
- Allows each student to observe a true chest rise.
- Full chest rise and lung bag ensures that students receive the most accurate and realistic training.
- Helps students take CPR learning experience seriously.
- Face/Head tilt enhances the CPR learning experience and teaches students how to open the airway during CPR.
- Audible clicker mechanism increases student's confidence in administering adequate compressions.
